Money Saving Days Extended to May 10th 10%

Cash Discount will be allowed
on all orders received before
May 10th

As our Cash Discount expired so early many of our customers were unable to take advantage of it, due to the unusually cold, late season.

This year the ideal planting time will be in late April and early May—three to four weeks later than usual.

That's the reason we feel that in justice to our customers we should extend the 10% discount period to May 10th and give you all the opportunity of buying your stock at a saving and planting it now, when weather and soil conditions will be almost perfect for best results.

As our stock is in a dormant condition the lateness of the season has no effect on it and we guarantee it to arrive at destination in a satisfactory condition.

Remember, we guarantee our stock to be positively true to name and free from disease.

Real estate dealers report that the planting of trees, shrubs, roses and vines increases value of property at least 25%.

Select what you need to improve your home and surroundings and order today.
